

# Children's health, by income level

Child **TRENDS**

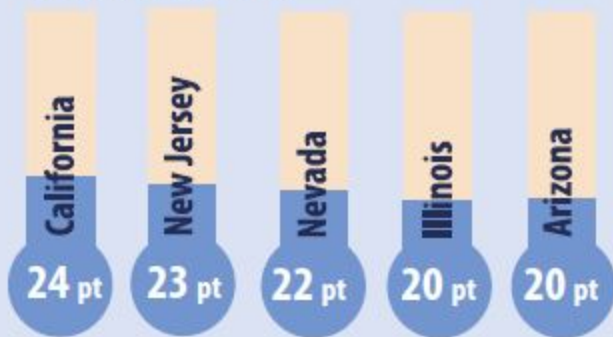

## Which kids are healthy?\*

Most U.S. children are in good health, but health varies by income level.

## States with the biggest health gap

Percentage point difference between low-income and non-low-income kids

## States with the smallest health gap

Percentage point difference between low-income and non-low-income kids

\*"Healthy" is defined as being in "excellent" or "very good" health, as reported by the child's parent in 2011/12
