## **Family Engagement**

Schools that prioritize Family Engagement (FE) recognize that strengthening families and cultivating positive relationships between families and schools promote student learning and healthy development and enhance the quality of school environments. This analysis explores provisions in state law that bridge the gap between home and school, including family involvement in school governance, the adoption of family-oriented school policies, and the provision of family support services and school personnel training to help school staff partner more effectively with families.

## How is family engagement addressed in state law?

- Forty states encourage or require school districts to develop and implement formal plans, policies, or programs to engage parents and families in the educational process. Although most schools understand the importance of engaging parents in the learning process, implementation is often mixed. Formal plans help provide structure to ensure parent engagement happens regularly.<sup>1</sup>
- Thirty-eight states encourage or require districts to include parents or family members
   in school planning and decision-making. These states often require parent representation on local governance councils or involving parents in school improvement planning efforts. Twenty-four states encourage or require parent involvement in developing or updating student codes of conduct.
- Sixteen states encourage or require districts to provide staff training addressing parent outreach and
  engagement, including training on how to establish parent-friendly school settings and how to
  promote awareness of community resources. Working with parents can often be a struggle for
  educators, and such trainings provide contextual and cultural awareness for ensuring open
  home/school communication.

This map shows states that have  $[\delta]$  comprehensive (12),  $[\Delta]$  moderate (24),  $[\Box]$  low (14),  $[\bullet]$  and no (1)

Figure 1. Fifteen states have no or limited coverage of

family engagement in state education policies.

## How comprehensively do states cover family engagement?

- About half of states (24 states), have moderate coverage of family engagement topics in their state laws (range: 44 percent to 66 percent), whereas 12 states are more comprehensive in their coverage (range: 78 percent to 100 percent). The area that was least frequently addressed in state law involved professional development on parent engagement strategies representing an area of policy opportunity.
- **Fifteen states had limited coverage of family engagement topics**. South Dakota was the only state that did not address any family engagement topics.

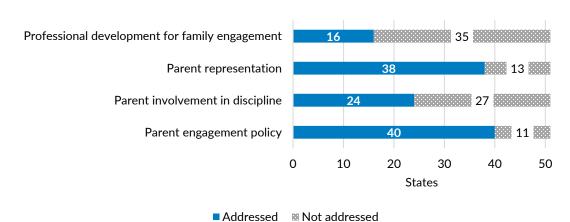

Figure 2. Number of States Covering Selected Family Engagement Topics

Child Trends, in partnership with The Institute of Health Research and Policy, University of Illinois at Chicago and EMT Associates, Inc., examined the extent to which 11 healthy schools domains are addressed in state policy. These domains include the 10 components of the Whole School, Whole Community, Whole Child (WSCC) model: Health Education; Physical Education and Physical Activity; Nutrition Environment and Services; Health Services; Counseling, Psychological, and Social Services; Social and Emotional Climate; Physical Environment; Employee Wellness; Family Engagement; and Community Involvement. An additional domain, the WSCC References domain, addresses the extent to which state laws include explicit references to the WSCC model or similar language, such as the Center for Disease Control and Preventions' Coordinated School Health model.

This sub-brief provides an overview of how state policies cover the Family Engagement domain. Sub-briefs covering the other domains as well as the compiled report can be found on the <u>Child Trends website</u>. Definitions of each of the nine topics are provided in the Appendix of the compiled report. Data from all topics are available through the National Association of State Boards of Education (NASBE) State Policy Database on School Health.
